## Device type PYCOM\_DevKit\_2 - Callback new

Callbacks

Type DATA ▼ UPLINK ▼

Channel URL ▼

Send duplicate ☐

Better precision ☐

Custom payload config

URL syntax: `http://host/path?id={device}&time={time}&key1={var1}&key2={var2}...`  
 Available variables: `device`, `time`, `duplicate`, `snr`, `station`, `data`, `avgSnr`, `lat`, `lng`, `rsSI`, `seqNumber`, `deviceType`  
 Custom variables:

The feature 'send duplicate' and the following information: `duplicate`, `avgSnr`, `lat` and `lng` will not be available anymore for customers in the DATA callback feature (see ["Custom Callbacks creation"](#) and ["Callbacks and Connectors"](#) articles)

The information `RSI`, `SNR` and `station` will be available through option. Contact your local Sigfox operator for more details.

Url pattern

Use HTTP Method POST ▼

Send SNI ☒ (Server Name Indication) for SSL/TLS connections
